Paintless dent repair

Paintless Dent Repair has been around since the 1980s when prestige car manufacturers were looking for ways to repair small dents that occurred during manufacture and delivery.

That system is now available in New Zealand no matter what kind of car has been damaged.

While there are a variety of techniques, they all involve leveraging or easing the dent back into its original shape.

This gentle procedure means the dent can be removed without damaging the paintwork or the need for a respray. So, you can get your car back looking the way it did before the dent occurred.

Common questions answered

Q. Does Paintless Dent Repair damage the paint on my vehicle?

A. No. Experts have examined the system, and ageing tests have shown no evidence of adhesion breakdown.

Q. How long do repairs usually take?

A. A Paintless Dent Repair can be all done in just a few days - as opposed to weeks sometimes, especially for car with hail damage.

Q. What type of damage can be repaired this way?

A. Paintless Dent Repair is best used for small dents - such as hail damage, or annoying dents that happen in car parks. It can repair minor bodywork damage when paintwork hasn't been damaged.

Q. How can I be sure my car will be safe to drive?

A. Your car is made up of two types of panels that serve different purposes. The inner panel maintains the structural integrity of the vehicle, while the outer panels are purely cosmetic. The Paintless Dent Repair process is only used on the outer panels and won't be carried out if the structural integrity of the car is damaged.

Q. Is the repair guaranteed?

A. Yes, if you're using one of our Approved Repairers, your repair is guaranteed. If you have concerns about your repair, please get in touch.
